

teleskopy.pl

A telescope that has been awarded the Product of the International Year of Astronomy 2009! FirstScope 76 is a tribute to men and women deserving to spread knowledge about the world around us - on the tubus there are the names and surnames of the greatest scholars in history. The small size and high quality of performance make FirstScope 76 perfect mobile equipment for amateur observation of the blue sphere. The construction of the instrument fits in with the increasingly popular idea of building Table-Top telescopes, i.e. light observation devices placed on a table or window sill. FirstScope 76 is an excellent choice for novice astronomers - a beautiful gift for an adult and an educational tool for children. It will show craters on the moon, the four moons of Jupiter, Saturn with the ring, the phases of Venus, bright nebulae and galaxies, and much, much more. OFFERED TELESCOPIC LETS START OBSERVATIONS IN THE FIRST WEATHER NIGHT - INCLUDES 2 SUNGLASSES

Technical parameters

- Optical system: Newton's reflector (mirror telescope)
- Diameter of the mirror: 76 mm
- Focal length of the lens: 300 mm
- lighted: f / 3.95
- Switch capacity: 1.53 "
- Star range: 11.9 mag
- Mounting type: Dobson, azimuth
- Weight: 1650 g (whole in the original box: 2500 g)

Equipment The set includes the following accessories:

- 1.25 "focuser
- Glasses: 20 mm and 4 mm (1.25 ", magnification respectively 15x and 75x)
- Dobson table azimuth assembly

Warranty 2 years

Additional photos of the accessory kit: Warning! This device focuses a lot of light. Looking directly at the sun through this device can result in partial or complete loss of vision. For the observation of the Sun, we recommend the safest method of spectacle projection, that is, projecting the image of the target of our day star on a piece of paper.
