

The TPL 3.0 MPix electronic eyepiece is one of the most advanced micrographs. The microscope camera most often chosen by scientific and research institutions in our offer. After placing the electronic eyepiece in the microscope tube in place of the traditional eyepiece, it allows you to view the preparation on the computer screen. Okular allows you to take pictures and videos of prescribed preparations. Such photos can then be digitally processed, shared with others and sent via the Internet. The included software allows you to control all possibilities and parameters of the electronic eyepiece, manage acquired images and prepare slideshows. The camera has a resolution of 2048x1536 pixels and is compatible with the majority of microscopes adapted to the eyepiece diameter of 23 mm or 30 mm. Characteristics **â€¢ simple and quick installation** **â€¢ simple mounting of the eyepiece in the tube** **â€¢ simple connection with a computer via the**
