

teleskopy.pl

SkyWatcher 60/700 is a small, but efficient lenticular telescope (refractor) with a lens diameter of 60 mm and a focal length of 700 mm. Due to its construction and dimensions, it is easily portable and can be successfully treated as an expeditionary telescope (for holidays, for the plot, for a trip out of the city), as well as an excellent equipment for balcony astronomy or observation and nature riflescope. This telescope allows you to conduct the first successful visual observations of planets and the Moon, showing a significant amount of details on the surfaces of these objects. In good observational conditions, it can reveal dozens of the brightest nebulae, galaxies and star clusters, mainly from the Messier catalog. A 1.25-inch focuser allows you to use any of the glasses made in this most popular standard. The whole is a perfect solution for beginners and intermediate enthusiasts of astronomy at a reasonable price. Usage Moon the planet star clusters nebulae scenery Technical parameters

- Optical system: achromatic refractor
- Lens diameter: 60 mm
- Focal length of the lens: 700 mm
- Lighted: 1 / 11.7
- Switching capacity: 1,8'
- Theoretical range: 10.5 magnitude
- Maximum useful magnification: 120x
- Dimensions of the optical tube [cm]: 7 x 7 x 70
- Height of the tripod [cm]: 60 - 115
- Weight: 2.0 kg

Equipment The set includes the following accessories:

- 1.25" focuser
- LER Super glasses: 25 mm (20x, 30x with a straightening lens) and 10 mm (50x, 75x with a straightening lens) - 1.25" standard
- 1.5x straightening lens
- 6x24 targetting scope
- AZ azimuth assembly
- Lightweight, stable aluminum tripod with accessory shelf
- Warranty 3 years

Warning! This device focuses a lot of light. Looking directly at the sun through this device can result in partial or complete loss of vision. For the observation of the Sun, we recommend the safest method of spectacle projection, that is, projecting the image of the target of our day star on a piece of paper.
