

A LED illuminator mounted on the lens of stereoscopic microscopes giving a white and very bright light. It is sometimes used as an additional lighting, but often it is the main upper lighting (when viewed in reflected light). Particularly recommended when the typical top-lighting in relation to the specimen does not give good results, eg due to the adjustment range or reflections. Thanks to the adjustable diameter from 45 to 60mm , it can be used with the majority of stereoscopic microscopes available on the market. 220 / 230V mains adapter built-in lamp Technical parameters
Glowing element: fluorescent lamp ("fluorescent lamp")
Power: 8 W
Advantages: does not generate heat, high luminous efficiency (in the order of 100 lm / W), long service life
Switch: YES
Mounting diameter: 45-60 mm
Power supply: 220 / 230V AC adapter included (integrated, built-in) Warranty 1 year
