---

The SkyWatcher R-80/400 telescope AZ-3 is a compact scope traveler (travel telescope), perfect for observing the Moon, planets, bright nebular objects and the Sun's target. Very rigid, easy-to-use assembly of the AZ-3 class with field tripod is great for spacing even in difficult terrain. What's more, the SK 80/400 is a great telescope for observing distant terrestrial objects (gives a terrestrial image, not reversed). OFFERED TELESCOPIC LANDS TO START OBSERVATIONS IN THE FIRST FALLING NIGHT - INCLUDES ALL NECESSARY ACCESSORIES

Technical parameters

- Optical system: achromatic refractor
- Lens diameter: 80 mm
- Focal length of the lens: 400 mm
- Lighted: 1/5
- Switching capacity: 1.45 "
- Theoretical range: 12 magnitudes
- Maximum useful magnification: 160x
- Weight: 4 kg

Usage Moon the planet star clusters nebulae scenery

Equipment The set includes the following accessories:

- Eyepiece lift - 1.25 "
- "Super" glasses: 25mm and 10mm (1.25 ") (magnification 16x and 40x)
- Angle prismatic 45 degrees 1.25 inches giving an uninverted terrestrial image
- 6x30 targetting scope
- AZ-3 azimuth assembly with micromodes in two axes
- Aluminum tripod with accessories shelf

Warranty 3 years

Warning! This device focuses a lot of light. Looking directly at the sun through this device can result in partial or complete loss of vision. For the observation of the Sun, we recommend the safest method of spectacle projection, that is, projecting the image of the target of our day star on a piece of paper.
