TPL MILITARY 7x50 RF is an excellent military binoculars, perfectly suited to low light conditions, and therefore perfect for hunters, sailors, bird watchers, fishing guards and forest guards, and all looking for a very durable, strong and clear binoculars for years. The binoculars have full water resistance up to 10 minutes to a depth of 1 meter thanks to the use of O-rings and nitrogen filling. The body is very strong, rubberized - these binoculars are not difficult to handle and intensive transport. The optics are covered with high quality anti-reflective MC layers, thanks to which the quality of the images obtained, contrast and brightness are at a very high level. An additional, very useful feature is the large depth of sharpness, thanks to which in the range of the observation distance from 7 meters to infinity, the binoculars do not need to be adjusted to the distance ("autofocus"), but only the initial adjustment of the vision defect user (+/- 5 Dioptres). This is of great importance at night, because in twilight conditions precise and quick focusing of the classic binoculars with the central regulation of focus is very difficult. People wearing glasses will appreciate the large offset of the exit pupil (22.0 mm). The characteristic feature of TPL MILITARY binoculars is the distancefinder net built into the eyepiece, allowing you to determine the distance to objects using a comparative (comparative) mesh and thousands (Refer to LEARNING: TIPS and WIKIPEDIA ) The net does not interfere with the conduct of normal observation, and is a useful addition for hunters, uniformed services and for people who practice hiking. Includes a neck strap, lenses covers and glasses, and a carrying case with a belt. The binoculars meet the requirements of MIL-ST810 (see WIKIPEDIA ) for resistance to rain, moisture, exposure to low and high temperatures, dust and dust, sea salt (breeze) in the field of rust,

high acceleration, shock ? and comprehensive structural resistance. Technical parameters

- Diameter of lenses 50 mm
- Zoom: 7x
- Exit pupil: 7 mm
- Distance of the exit pupil: 22 mm
- Field of view: 7.5 °, 132 m / 1000 m
- reflective layers: MC
- Prisms: BaK-4, Porro
- Focus range: from 5 m to infinity
- Spacing of interpupillary (IPD) (min / max, mm): 56/74
- Weight: 1100 g
- Adjusting the focus to the viewer's eyes: YES, +/- 5 D
- Possibility of mounting on a tripod: YES (via the optional L-adapter)
- Waterproof: YES
- Shockproof: YES
- Rangefinder: YES
- Illuminated compass: no
- Twilight factor : 18.71

Usage scenery hunting sailing nature military Purpose of the binoculars:

- military
- police / uniformed services
- marynarka / yachting / rybkarstwo
- hunting
- all field activities

Warranty 2 years (view through the right eyepiece with a rangefinder) Warning! This device focuses a lot of light. Looking directly at the sun through this device can result in partial or complete loss of vision.
