TPL MARINE 7x50 C is a perfect binoculars for water, equipped with an illuminated compass, waterproof and perfectly checking in conditions of low light, and thus being an indispensable element of every yachts equipment. Recommended for the fishermen's guards and for sailors in the source and sea, as well as for all who search for very durable, strong and clear binoculars with a compass. The binoculars have full water resistance up to 10 minutes to a depth of 1 meter thanks to the use of O-rings and nitrogen filling. The body is very strong, rubberized - these binoculars are not difficult to handle and intensive transport. The optics are covered with high quality anti-reflective MC layers, thanks to which the quality of the images obtained, contrast and brightness are at a very high level. An additional, very useful feature is the large depth of sharpness, thanks to which in the range of the observation distance from 7 meters to infinity, the binoculars do not need to be adjusted to the distance ("autofocus"), but only the initial adjustment of the vision defect user (+/- 5 Dioptres). This is of great importance at night, because in twilight conditions precise and quick focusing of the classic binoculars with the central regulation of focus is very difficult. People wearing glasses will appreciate the large offset of the exit pupil (22.0 mm). The characteristic feature of the TPL MARINE binoculars is the built-in compass visible in the right eyepiece. In day conditions, the compass is illuminated by natural light. In full darkness, we have a LED illumination (the color close to red, does not spoil the eye's accommodation to the dark). The compass usually does not interfere with users in conducting normal observations, but is an essential addition for sailors, it can also be a

help for hunters and people who go hiking. In the field of view of the binoculars there is also a horizontal and vertical rangefinder range of thousands, allowing you to estimate the distance in the field. Includes a neck strap, lenses covers and glasses, and a carrying case with a belt The binoculars meet the requirements of MIL-ST810 (see WIPEDIA) for resistance to rain, moisture, exposure to low and high temperatures, dust and dust, sea salt (breeze) in the field of rust, high acceleration, shock ? and comprehensive structural resistance. Technical parameters

- â€¢ Diameter of lenses 50 mm
- â€¢ Zoom: 7x
- â€¢ Exit pupil: 7 mm
- â€¢ Distance of the exit pupil: 22 mm
- â€¢ Field of view: 132 m / 1000 m
- â€¢ Anti-reflective layers: MC
- â€¢ Prisms: BaK-4, Porro
- â€¢ Focus range: from 5m to infinity
- â€¢ Spacing of interpupillary (IPD) (min / max. mm): 56/74
- â€¢ Weight: 1150 g
- â€¢ Adjusting the focus to the viewer's eyes: YES, +/- 5 D
- â€¢ Possibility of mounting on a tripod: YES (via the optional L-adapter)
- â€¢ Waterproof: YES
- â€¢ Shockproof: YES
- â€¢ Rangefinder: YES, a thousand net
- â€¢ Illuminated compass: YES
- â€¢ Compass power supply: 2 x LR-44 1.5 V
- Twilight factor : 18.71

Usage scenery hunting sailing nature military Usage

- â€¢ military
- â€¢ police / uniformed services
- â€¢ marynarka / yachting / rybkarstwo
- â€¢ hunting
- â€¢ all field activities

Warranty 2 years (view through right eyepiece with rangefinder and compass) Warning! This device focuses a lot of light. Looking directly at the sun through this device can result in partial or complete loss of vision.
