

The high-performance Explorer Scientific 14 mm optical frame with an ultra wide 82 ° field of vision offers an amazing viewing experience, using the latest computer-aided design methods to optimize its usability. The design is based on a 7 element lens system Made of low dispersive, high quality glass, covered with multilayered patented EMD (Enhanced Multilayer Deposition) coatings, these coatings increase the transmission of light, provide the highest contrast and sharpness and a flat image throughout the wide 82-degree field In addition, the edges of the lenses have been blackened to further improve the contrast. These eyeglasses have a nitrogen filling that makes them 100% water-resistant, preventing the internal haze formed inside the glasses and making them easier to clean because liquid cleansers are not able to get to the inside the lens system, which protects the glasses and guarantees their longevity. In addition, the glasses in this series have a soft deflection, I need an eye that provides the comfort of observation. Technical parameters ∅ Construction: 7 optical elements ∅ Focal length: 14 mm ∅ Field of view: 82 ° ∅ Diameter of lens: 1,25" ∅ Output: 15 mm ∅ Anti-reflective layers: FMC ∅ Weight: 255 g Warranty: 2 years
