

teleskopy.pl

Connection cable for control of assembly using a laptop and relevant software in Celestron computerized telescopes. On the one hand, we connect it to a PC (RS-232 port or COM) and on the other to the AUX port. The cable allows you to: • connecting the telescope to a computer to control it with available programs, eg Stellarium • updating the telescope remote software from the manufacturer In order to connect to the USB port, an RS / USB converter is required, available in computer stores. Length: 2 meters
