

teleskopy.pl

The classic telescope telescope with a compact and lightweight design works well on off-road terrain and during strenuous marches in hunting hunts, when weight plays a significant role. A wide-angle eyepiece with a constant, 30x magnification, guarantees a large field of view and makes it easier to find an object. SWAROVSKI OPTIK telescopic telescopes offer bright images that are sharp at the edges at different light intensities. Thanks to the smooth ejection mechanism, they are extremely handy, and due to the small transport size they are perfect for every hunter's backpack. The coating on the outer surface of the SWAROCLEAN lens has anti-adhesive properties, facilitating removal of impurities from objective lenses and spectacles, primarily dried mineral residues (eg water stains after misting), insecticide or wood resin. Lenses can be cleaned with less intensity, which significantly increases the durability of optical products.
