

Binoculars Delta Optical Titanium 8x56 ED - binoculars' binocular binoculars for hunters of Polish-Japanese production! Titanium 8x56ED is an improved version of Titanium 8x56 binoculars. The basic change is the use of low-dispersion ED glass in the lens, which allows reduction of chromatic aberration. Taking advantage of the lack of aberration, it became possible to widen the field of view, which in the new ED binoculars is over 7.2 °. The slightly different design of the eyepieces also makes it practically non-distortion. Other features as in the classic 8x56 - here we find excellent anti-reflective coatings guaranteeing the right contrast and optical efficiency of 92%. The binoculars are waterproof and nitrogen-filled. In contrast to the classic 8x56, it was covered with rough rubber. It is one of the cheapest binoculars with ED glass on the market, offering an excellent value for money. A great choice for hunters, ideally suited to night hunting.

Includes a neck strap, lenses covers and glasses, and a carrying case with a belt Technical parameters ∅ Lens diameter: 56 mm ∅ Zoom: 8x ∅ Exit pupil: 7 mm ∅ Construction of prisms: porropryzmatyczna ∅ Field of view: 12 meters / 1000 m (7.2 °) ∅ Minimum distance of observation: 5 meters ∅ Material of glass elements: optical glass BaK-4 in prisms, elements ED in objectives ∅ Waterproof: YES ∅ Anti-reflective layers: MC, green ∅ Possibility to connect a tripod: YES ∅ Weight: 1150 g Usage astronomy hunting planes nature scenery Warranty 10 years
