

High-quality telescope with good brightness and field of view. It makes it easy to find interesting objects in the sky. This is a corner finder. This brings two advantages: first, it gives a terrestrial image, and secondly it allows observation perpendicular to the telescope tube, which will be especially appreciated by the telescope holders in the Newton system (the eyepiece eyepiece will be next to the main telescope eyepiece). Optical surfaces covered with FMC layers. The set includes a binding fixture and a standard mounting foot for the tube. In the current delivery, the manufacturer changed the screws from plastic to metal

Technical parameters

- Zoom: 8x
- Lens diameter: 50 mm
- Cross from threads: Yes
- Roughreader: Yes
- Simple image (not reverted): Yes
- Length: 205 mm
- Length of the "white" part: 88 mm
- Diameter of the tube: 53 mm
- Weight: 520 g
- Warranty 2 years
