Challenger 3.5x50 - night vision from Pulsar / Yukon is the development of the very successful Exelon series. The heart of the night vision device is a high-performance image intensifier (CF-Super Image Intensifier) providing a contrasting image, sharp from shore to edge and devoid of geometric distortion. The body of the night vision device is hermetic and waterproof, the equipment can be used without any worries in any conditions, including in desert conditions, with high dustiness. The 3.5x50 Challenger is equipped with a powerful infrared illuminator that can be used when observing in complete darkness. In addition, the body has a place to attach an additional display. The night vision and infrared illuminator are activated by one switch, the switch is designed to prevent accidental activation of the display (which could, for example, unmask the position of the observer). Challenger 3.5x50 is widely used, it can be used for tourism, hunting or protecting property. Technical parameters

- Generation: 1+
- IR illuminator: built-in
- Resolution: 42 ln / mm
- Zoom: 3.5x
- Diameter of the lens: 50 mm
- The range of observations with the lighting: 250 m
- Field of view: 11 °
- Focus range (Diopter): +/- 4
- Eye relief (eye relief): 12 mm
- Power supply: 3 V (1x CR123, included)
- Temperature range: from -20 to + 40 ° C
- Working time without changing the power source: 50 h (20 h with lighting switched on)
- Dimensions: 234 x 79 x 57 mm
- Weight: 500 g
- Warranty 3 years
