

A spare lithium-ion battery for the HD HERO, HD HERO 2 and HD HERO 3 camcorders, along with housing components and a laptop charger. 1100 mAh capacity is enough for an additional 2.5 hours of recording, together up to 5 hours of continuous work, ie 2 x longer! (\*) This is a great solution for longer sessions, for example in motor sports or horse traverse, and for long series of time-lapse photos. The set includes a flap for a waterproof case, thanks to which the water resistance of the camera is preserved, a flap with holes to record movies with better sound quality and a USB cable for charging the battery. This cable can be used to charge the second battery (also for the Hero 960p) from the laptop's USB port. The battery has a battery status indicator LED. (\*) depends on the battery condition, humidity and ambient temperature - these elements affect the exact working time on 1 charged battery Note: the product is not compatible with HD HERO 960. It may require a software update (firmware upgrade on the manufacturer's website [www.gopro.com](http://www.gopro.com)) Warranty 24 months Additional product photos Manufacturer's materials
