

DIPOL IR L-3 is a laser night vision illuminator. It can be mounted on Dipol night vision devices or treated as an independent infrared source for night vision goggles of other companies. It has its own independent source of power (one 3 V CR123 battery), thanks to which the working time of the night vision device is not shortened by switching on the illumination. The L-3 illuminator is designed for attaching to Dipol night vision binoculars. The Dipol lunettes / monoculars are designed for L-2 illuminators with analogous parameters and suitable for monocular mounting. The LR-3 laser illuminator increases the range of the night vision device up to 600 meters, remaining practically invisible to an outside observer! Works with older models of DIPOL night vision binoculars: D212 3.5x, D212 6x, D212 4x. Currently offered binoculars cooperate with a different model of the illumination. Technical parameters ∅ Power: 100 mW ∅ Type: laser ∅ Length of the light wave: 810 nm ∅ Focus of the bundle: 0.1 ° - 5 ° ∅ Power supply: one 3V CR123 battery (included) ∅ Temperature range: from -40 to + 40 ° C ∅ Working time without changing the power source: 6 hours ∅ Dimensions: 114 x 24 x 31 mm ∅ Weight: 75 g Warranty 1 year warranty Additional photos (fixing the display to the body in cooperating models - older type)
