

Fenix TK20 is the world's first mass-produced LED flashlight emitting virtually perfectly white light, thanks to which it perfectly reproduces natural colors. This was achieved thanks to the use of a special Cree Neutral White (Q2) 7090 XR-E LED diode . An additional advantage of the Fenix TK20 flashlight is its excellent efficiency in difficult observation conditions, eg fog, rain, dust. Total waterproofness (IPX-8 standard) means that we can use it during rain, on fish and in any unfavorable conditions. Ideally suited for hunting, sailing and survival. Power: two AA batteries ("sticks") We have two modes of lighting, weaker - 45 lumens, and a stronger one - 150 lumens, in which visible light can reach up to 150 m. Modified modes are made by turning the front head. The tactical switch allows the flashlight to be switched on quickly without any sound. The small size and low weight of the TK20 make it easy to fit into your pocket. The flashlight is rubber at the place of grip. Technical parameters / characteristics

- maximum light output: 150 lumens
- body: anodized duralumin (Mil-Spec)
- source of light: Cree Neutral White (Q2) 7090 XR-E LED
- working time on one set of batteries: 11 h (45 lumens), 2 h (150 lumens)
- LED lifetime: over 50,000 h
- resistance to rain and moisture: YES, IPX-8
- power supply: 2x 1.5V AA ("sticks")
- dimensions: 34 x 159 mm
- weight: 152 g (without batteries)
- included:
