

READ TO: HOW TO CONNECT COMPACT WITH TELESCOPIC <img

src="https://teleskopy.pl/pdf/tis/icon_download.gif" [PDF] The connector allows you to attach virtually any compact camera to the TELESKOP's eyepiece and allows you to connect LUNETTA, MICROSCOPE, BALL MOUNT or NIKEISOR with a "compact". It has precise screws that adjust the position of the "shelf" on the camera and a 1/4 inch screw to fix the camera. VERSION A LARGE SCOPE ADJUSTMENT OF THE DIAMETER OF THE SHOULDER CLAMP : 38 - 55 mm - fits, for example, with TPL 20x80 binoculars Note: for large compacts (so-called hybrids) and reflex cameras with a lens attached, a different adapter is used - Baader Clickstop Microstage II (available in our store)
