

teleskopy.pl

A small hand-held digital microscope with integrated camera and 1.8" LCD display, offering a magnification from 3.2x to 32x. Six-point LED lighting allows for optimal illumination of observed objects. The microscope has the ability to take pictures and record movies that can be viewed on the built-in color display. Saved images can be stored on a memory card (up to 16 GB) or transferred directly to a computer using a USB cable. The device is dedicated to both playing and technical and scientific observations. It is not suitable for the observation of typical microscopic specimens adapted for examination in the light passing through. It works perfectly as a teaching aid for pupils and students used to observe insects, small insects, leaves, minerals, etc. Used in agriculture and breeding, it will allow quick identification of pests

and parasites and the right treatment. Technical parameters: camera: CMOS 1280x1024 matrix resolution: 1.3 MPix lighting: 6-point LEDs internal memory: 32 MB application of an SD card: YES to 16GB PC connection: YES, USB cable compatibility: Windows XP SP3 / Vista / 7/8 Warranty 2 years
