

Meade 5000 HD-60 glasses in 1.25 inch size are the most advanced 6 element observation glasses from the elite Meade 5000 series. They are characterized by outstanding optical quality and guarantee a flat, sharp image in the whole field of view, in most cases Telescopes. All optical surfaces are covered with very good MC layers. The whole eyepiece is very well blackened, which additionally eliminates reflections. Okular is characterized by a very good retraction of the exit pupil equal to 18 mm - thanks to this, also people wearing corrective eyeglasses do not lose their peripheral vision. The eyecup is rolled.
