

teleskopy.pl

Observation map of the visible side of the Moon. **NECESSARY ADDITION TO THE ASTRONOMIC TELESCOPIC** An indispensable addition for every telescope holder. The map shows the visible side of the Moon along with over 200 names of the most important structures and formations on the surface of our natural satellite, in accordance with the currently valid nomenclature of the International Astronomical Union. On the reverse there is a short description of the basic phenomena associated with the Moon - the formation of the phases of the Moon, solar and lunar eclipses, and libration. " Format: round, $\varnothing = 295$ mm " Binding: foiled, waterproof " Publisher: InSolutions Aleksander Kacz, Warsaw " Publication year: 2012 " ISBN: 978-83-933430-2-7
