

teleskopy.pl

A complete optical tube with a 305 mm F / 4 mirror (12 inches, focal length 1200 mm), with a monorail (modified Crayford extractor) 3 " / 2" / 1.25 "with a 10: 1 microscope and a very good finder 8x50, designed for advanced astrophotography and highly advanced visual observations, both solar system objects, as well as star clusters, nebulae and galaxies, has a very bright parabolic mirror, relatively small size and 21.6 kg weight with clamps, which makes this telescope very fast and efficient astrograph. To get a good working comfort we recommend the NEQ6 Sky-Watcher, available separately for this tube. Characteristics

- large glass mirror with diameter 305 mm (12 inches)
- f / 4 brightness for astrophotography (strong stand required), as well as for advanced visual observations
- efficiency of mirrored surfaces 94% of the main
- 3-inch cut with 2-inch and 1.25-inch reductions with a 10: 1 micro-processor
- Optical finder 8x50 fixing to the tube
- 2 " / 2" eyepiece adapter 35 mm with clamping ring
- tube clamps and dovetail mounting rail 15 mm wide (Lesmandy)

Technical data

- Optical system: Newton reflector
- Diameter of the lens: 305 mm
