Telescope Celestron Land & Sky allows for terrestrial observations with 30 and 150x magnification, as well as taking first steps in observations of the Moon and planets. The diameter of the lens is 50 mm, and the focal length is 600 mm. Includes 90 degree angle connector. You do not need any tools to start the observation. Aluminum tripod included.

Technical parameters

- Optical system: refractor (achromatic doublet)
- Lens diameter: 50 mm
- Focal length of the lens: 600 mm
- Magnification in the set: 30x and 150x
- Maximum useful magnification: 100x (in astronomy)
- Eyeglass extractor: 0.965 "/ 24.5 mm
- Finder: 3x20
- Mounting type: azimuth, ALU
- Tripod height: 118.5 cm
- Weight: 1.02 kg

Usage Moon the planet star clusters nebulae scenery Warranty 2 years Additional photos Note: in the current delivery tube in blue Warning! This device focuses a lot of light. Looking directly at the sun through this device can result in partial or complete loss of vision. For the observation of the Sun, we recommend the safest method of spectacle projection, that is, projecting the image of the target of our day star on a piece of paper.
