

Ring (extension / extender) T2 / T2 with a length of 7.4 mm (5 g), used in the case of differences in optical paths between the right camera (photographing) and guiding in OAG , and also whenever we want to extend the optical path through T2 threads while maintaining high stiffness and axially. Technical parameters ∅ optical length: 7.4 - 7.5 mm (depending on the twisting force) ∅ fixing: T2 on both sides (1 x male, 1x female) ∅ weight: 5 g
