

teleskopy.pl

Binocular attachment Binocular Viewer allows you to install two glasses in the telescope extractor and thanks to that, binocular observations, like through binoculars. It allows to eliminate fatigue resulting from long observations conducted with one eye and additionally creates a three-dimensional effect during observations, especially of the Solar System objects. The attachment improves the contrast and visibility of all observations. Binocular attachment "Binocular Viewer" requires the use of two glasses with the same focal length and the same optical construction. The high-quality anti-reflective FMC BAK-4 prisms are used in the snap-in, which minimize light losses and ensure high optical efficiency. The socket is intended for SCT telescopes, refractors and Newtons. Technical parameters $\hat{\text{€}}\hat{\text{€}}$ in the set: binoviewer, 2 glasses 20 mm WA 66 (1.25 ") and Barlow 1.6x $\hat{\text{€}}$ attachment to the hood: 1.25 " $\hat{\text{€}}$ standard of glasses: 1.25 " $\hat{\text{€}}$ weight: 520 g Warranty 2 years
