The reusable EPS5 rechargeable battery is designed to power Pulsar and Yukon digital devices, especially thermal imagers and night vision devices. It works perfectly with the Digsight N550 night vision device, the Ranger 5x42, the Recon X550 and other devices equipped with an external power jack . EPS5 has a 1 m power cord, so you can put it in your jacket's inner pocket during cold nights, which significantly extends the life of the device. The EPS5 battery has a capacity of up to 5 Ah! This allows you to provide independent power for up to 20 hours. Long cable (100 cm) allows you to attach the battery in any convenient place, such as a backpack or pocket. Thanks to the additional adapter for devices powered from the cigarette lighter socket, the EPS battery is also ideal for powering other devices such as GPS navigation, FM modulators, mini TV sets, mobile phones, etc. Technical parameters – battery type: Li-polymer – capacity: 5 Ah – rated voltage 12 V – charging voltage: 12.6 V – working voltage: 8.9 V – charging time: 4 hours – average working time: 20h – impedance: <100 m Ω – battery life: 500 cycles – charging temperature range: from 0 ° C to + 45 ° C – operating temperature range: -20 ° C to + 60 ° C – protection class: IPX3 – dimensions: 106x75x20 mm weight: 0.35 kg
