Camrock VSL120 is a slider with a length of 120 cm, designed for cameras and SLRs. It allows for smooth running and recording video in the perspective of travel on the line. It allows you to take horizontal, vertical and angle shots. The slider rail is made of rigid aluminum. It has five 1/4 inch holes and one central 3/4 inch, allowing the slider to be mounted on one or two tripods. At the ends of the rail there are supports with adjustable feet. Supports can be unscrewed from the rail, increasing the possibility of assembly settings. Adjustable feet can be removed. Sledges on the slider allow the attachment of a photographic head / camera / camera with a 1/4 or 3/4 inch thread. They have a travel lock and a spirit level. Four mounting holes allow assembly of the equipment in various configurations. The entire slider can be turned into individual elements - it facilitates transport and storage. Technical parameters ∅ length: 120 cm ∅ material: aluminum ∅ camera / apparatus mounting: 1/4 "and 3/8" screws ∅ black colour ∅ weight: 1900 g (camera and head - Camrock H030 - not included)
