

teleskopy.pl

LandScout 60 is a new Celestron telescope with a lens diameter of 60 mm and variable magnifications in the range of 12-36 times. It is a simple to use and reliable companion of every activity in the field. The compact, lightweight design encourages you to take a telescope for every trip. LandScout 60 is very good at shooting - while observing the shield. Its strong, sealed construction allows it to be used also in difficult weather conditions. Although it is a telescope from the economic shelf, it has optics covered with good MC layers and is characterized by good sharpness and brightness.

Characteristics

- FC anti-reflective layers for images with higher brightness and sharpness
- very compact and light construction
- swivel mounting foot for tripod - allows you to adjust the position of the eyepiece optimal for a given application (eg lateral position of the eyepiece during shooting)
- eyepiece with variable magnification in the range of 12 to 36 times - from wide field of view to zoom in with a high level of detail in the image
- the large focus adjustment knob allows you to set the image precisely

Technical parameters

- Zoom: 12-36x, zoom
- Diameter of the lens: 60 mm
- Optical system: achromat refractor + Amici's 45 ° BK-7 prism
- Anti-reflective layers: FC
- Field of view: 3 ° - 1.6 ° (52 - 28 m / 1000 m)
- Minimum distance of observation: 6 m
- Length of the tube: 27 cm
- The height of the table tripod (max): 25 cm
- Weight: 545 g (850 g with a tripod)
