Camrock VSL60 is a slider with a length of 60 cm, designed for cameras and DSLR cameras. It allows for smooth running and recording video in the perspective of travel on the line. It allows you to take horizontal, vertical and angle shots. The slider rail is made of rigid aluminum. It has seven 1/4 inch threads including one central and seven 3/4 inch threads, including one central, allowing the slider to be mounted on one or two tripods. At the ends of the rail there are supports with adjustable feet. Supports can be unscrewed from the rail, increasing the possibility of assembly settings. Height adjustable feet can also be removed. Sledges on the slider allow the attachment of the head / camera / camera with a 3/4 inch thread. They have a travel lock and a spirit level. The slide is moved thanks to four ball bearings made of metal. The entire slider can be turned into individual elements. It facilitates transport and storage. Technical parameters - length: 60 cm - weight: 1430 g - material: aluminum - camera / apparatus mounting: 1/4 "and 3/8" mounts - black colour (camera and head are not included)
