

Baader Planetarium series of eyepiece spectacles sets new quality among planetary glasses! The 4-element optic is coated with HT-multicoated layers. Thanks to this, spectacles corresponding to the quality of the legendary series of Zeiss Abbe orthoscopes were obtained. Pictures with very good sharpness, brightness and contrast are additionally devoid of distortion and chromatic aberration. Only the combination of the orthopedic system traditionally known for its highest contrast (only four glass / air borders along the path of light) and high-class, modern glass and anti-glare coatings allows for uncompromisingly vivid images of planets and maintaining a competitive price. â€ Focal length: 6 mm â€ Diameter of binding: 1.25 inches â€ Filter thread: 1.25 inches (M28,5x0,6) â€ Anti-reflective layers: HT Multi Coated â€ Parafocality with other glasses from the series: YES Warranty 2 years
