Access to the universe is even faster and fuller with WiFi Sky Link II generation. â€¢ free mobile application for OS and Android, direct connection to the SkyQ Link II WiFi adapter the function of recognizing objects and automatic guiding them with one touch â€¢ helps to align telescopes â€¢ a database of over 100,000 astronomical objects, including the Moon, planets, galaxies and nebulae â€¢ automatic tours in the sky ( guided tours ) â€¢ work in stand-alone mode (without a telescope) as an app-virtual planetarium â€¢ the most popular objects have descriptions and photos â€¢ the application explains the history, mythology and basic features of the majority of popular objects â€¢ you can use the accelerometer and use the application in the form of a digital finder The innovative Celestron SkyQ Link I8 WiFi module raises the technology of our SkyQ application to a higher level by activating the wireless control function for most of the Celestron computerized telescopes. It allows not only completely wireless use (including telescope setting on the stars); the SkyQ Link module will let you automatically target the telescope with just one touch of the screen on the iPhone / iPad (planetarium interface). The SkyTour function will generate a list of the most interesting stars, galaxies and nebulae for a given place and time of observation. The SkyQ Link WiFi II adapter is compatible with the following Celestron models: Advanced VX, CG-5 (via optional cable), CGE Pr, CGEM, CGEM DX, CPC, LCM, NexStar Evolution, NexStar SLT, NexStar SE, SkyProdigy.
