

The off-axis guider manufactured by ATIK is a solution designed to lead off-axis (guiding). Such a guider has on the edge of the optical path a small prism directing the light at 90 ° to the optical axis, straight to the autoguidera camera (the guiding camera is not part of the set). ATIK OAG is suitable for guidings with a matrix size of up to 35 mm. The prism can be moved along the radius of the passage. OAG has an M54 thread. Attach the 2" reduction (in the set) to the thread and connect to the 2" extractor in this way. The Off-Axis Guider is additionally equipped with 4 mm, 7 mm and 15 mm extensions. Technical parameters – Diameter: 54 mm – weight: 180 g – mounting standard: M54 / 2 "
