

Explorer 5.5 optical eyepins with an incredibly wide, 100 ° field of view. In addition to the extremely wide field of view, it also has a significant offset of the exit pupil, ensuring comfortable observation also for people wearing corrective eyeglasses without losing sight peripheries. Thanks to an 8-lens optical system with lanthanum elements, it dramatically corrects chromatic aberration. Special EDM (Enhanced Multilayer Deposition) coatings on the surfaces of optical elements ensure high transmission of light. Waterproof, waterproof and filled with argon lens system prevents fogging of optics even in high humidity nights - each 100 ° eyepiece is tested for leakage by the manufacturer by immersing in water for 30 minutes to a depth of 1 meter. Okular allows you to enjoy the perfect sharpness of images and spot images of stars in the whole powerful field of view. â€¢ Construction: 8 optical elements in 6 groups â€¢ Focal length: 5.5 mm â€¢ Field of view: 100 ° â€¢ Diameter of binding: 2 "/ 50.8 mm â€¢ Anti-reflective layers: EMD / FMC â€¢ Weight: 600 g

Warranty 2 years
