Dispersion, high quality glass, covered with multilayered patented EMD coatings (Enhanced Multilayer Deposition). These coatings increase the transmission of light, provide the highest contrast and sharpness, and a flat image across the wide 68-degree field of view. In addition, the edges of the lenses have been blackened to further improve the contrast. These glasses have an argon filling that makes them 100% water-resistant, preventing internal hazards formed inside the glasses and making them easier to clean because liquid cleansers are not they are able to get inside the optical system o. It protects glasses and guarantees their long life. In addition, the glasses in this series have a soft deflection, I need an eye that provides the comfort of observation. Argon that provides water resistance prevails over nitrogen once, due to the larger size of the molecule (more difficult to "escape" from the eyepiece), two, due to chemical

inertness. Each eyepiece is tested for leakage by immersion for 30 minutes in 1 meter deep water. Technical parameters

- Focal length: 16 mm
- Field of view: 68 °
- Diameter of binding: 1.25 "
- Retracting the output pupil: 11.9 mm
- Anti-reflective layers: EMD / FMC
- Water resistance: yes, Ar
- Weight: 158 g
- Warranty: 2 years
