

The new generation charger allows fast and safe charging of two batteries via a mini or micro USB socket connected to a computer, a mains charger or powerbank. The charger has a microprocessor controlling the charging process, thanks to which charging proceeds quickly and is safe for batteries. The microprocessor protects against overheating and overcharging of the battery. When the charger is switched on, the battery charge level is checked, and then the charging process begins. After charging, the charger goes into standby mode and stops charging. Thanks to this, there is no fear that the battery left in the charger will be overloaded for a long period of time. Technical parameters – model: Newell DC-USB HERO4 – technology: processor – charging current: 2 x 4.34 V 0.8 A – compatible with original batteries and replacements, HERO4 Silver / Black, AHDBT-401 – charger and mini USB cable included Warranty 24 months
