SuperBee GEP300 telescopic arm 300 cm long for GoPro HERO cameras, sports cameras, small cameras and cameras, mobile phones and as a boom for microphone or flash SuperBee GEP300 is the longest telescopic arm (boom) for GoPro cameras available on the market. It allows you to move the camera / camera to 300 cm. Allows you to take shots from a further perspective. Useful when filming sports such as skiing, snowboarding, roller skating and many more. In many cases, it allows you to get an effect similar to filming from a drone. The accessory was made with great care using high-quality materials. The GEP300 has a direct mount for GoPro cameras. Thanks to this, it ensures a high rigidity of the connection. The set also includes adapters: with a 1/4 inch threaded attachment, it allows the attachment of all small cameras and cameras with a 1/4 inch tripod thread and an adapter for mobile phones with a maximum width of 80 mm. The pull-out lock is done by closing the latch, this ensures a quick and certain change in length. The handle has been covered with a special sponge that guarantees a secure grip and comfort of use. The arm fits all GoPro Hero cameras. The long screw does not rub against the waterproof case during assembly. In addition, the arm can be used as a boom for flash, led or microphone. Technical parameters \varnothing length range: 89 - 300 cm \varnothing weight: 515 g \varnothing material: aluminum + plastic, sponge on a hand-piece \varnothing possibility to block the section anywhere: yes \varnothing number of sections: 4 \varnothing mounting standards included: GoPro, photo 1/4 inch, 80 mm wide smartphone clamp Warranty 24 months
