

teleskopy.pl

A smaller version of the original goggles for GoPro cameras, designed for children (3+) and younger youth. Allows you to attach HD Hero camera on the chest (all versions). Braces have adjustable size and tension. You can put them on both a light T-shirt and a winter, down jacket. They work well when you want to take movies and photos from your chest height, not over your head. They are used during skiing / snowboarding, riding a bike, a motorbike. An additional advantage will be framing the image with visible hands, knees, skis and ski poles or hand steering during cycling / motorbike, which in total often gives a "livelier" effect of the final recording. The set includes braces and a metal plate for horizontal mounting of the camera. Note: braces intended for children from the age of 3 years. Permanent supervision of an adult is required during use. Suggested range of body weight: from 11 to 52 kg. Information The use of harness / harness has one undeniable advantage: the camera will usually be more stable, and the image will be less "flying", because almost always we move the head more than the body. In addition, the harness straps additionally counterbalance each other, reducing vibration. Warranty 24 months
