

Fork binocular mounting is a specialized azimuthal head. It allows comfortable binocular observation both near the zenith and during landscape observations. The binoculars are mounted on a 1/4" tripod placed on the center of the cradle, while from the tripod side there is a 3/8 inch thread, that is the standard thread of the photographic head attachment. It can also be used for observing small lens telescopes, SCT or Maksutów and observation telescopes. ∅ maximum width of the binoculars (fork spacing): 22.8 mm ∅ lifting capacity: depends on the weight of the tripod (photographic tripod) and photographic adapter ∅ weight: 3 kg ∅ works with all 20x80 binoculars (TPL, Bresser, Celestron, Vixen, etc.) and TS 25x100, Celestron 25x100
