

Polar spotlight backlight module, dedicated for Sky-Watcher EQ3-2 and EQ5 mounts, as well as the new Sky-Watcher Star Adventurer assembly. The module is mounted on the opposite side of the head than the polar scope, from the side of the light inlet. A diode with intensity regulation gives the effect of a bright field, against which the contours of the constellations visible in the polar scope can be seen better. A very useful element especially when setting the installation away from the city glow, under a dark, rural sky. • compatibility: Sky-Watcher EQ3-2 and EQ5 mounts, polarizing scopes for SW AZ-EQ5, Star Adventurer, similar assemblies of Vixen and Celestron (selected models) • Diameter of the fastening element to the hole in the assembly: 33.7 mm (? hole in the assembly Sky-Watcher: 33.9 mm) • backlight effect: dark shapes on a bright field • power supply: 1 x CR2032 3 V lithium • weight: approx. 20 grams Warranty 2 years
