

Extremely light rangefinder COOLSHOT 40i with a measuring range up to 590 meters is intended for golfers who want to raise their skills. It features Nikon's angle compensation technology, displaying the distance with respect to the slope (horizontal distance + height). It works great on golf courses with hills. The first-priority mode allows you to measure the distance to the golf course on the golf course, visible against the background of trees. HYPER READ technology allows you to display the distance instantly (after about 0.5 seconds), regardless of the distance from the target, so you can focus on the game. High-quality, multilayer coated 6x magnification coating provides a clear and clear image. Characteristics + optics: 6x21 + measurement range: 7.5-590 m + accuracy: ± 0.75 m + fast (about 0.5 sec) And stable measurement regardless of the distance - thanks to the HYPER READ function + system for switching the priority of objects (priority mode of the first plan and priority mode of the second plan) + angle compensation function: yes (distance including slope) + ease of use + small, light and resistant to rain Technical parameters + Measurement range: 7.5-590 m (pole with flag: 411 m, tree: 594 m) + Accuracy: +/- 0.75 m + Measurement step: 0.5 m + Measurement time: about 0.5 s + Automatic shutdown: yes, after 8 seconds + Measurement priority: priority of the distances of the nearest and distant object + Measurement methods: real distance, horizontal distance, altitude, distance including slope + Zoom: 6x + Lens diameter: 21 mm + Field of view: 7.5° + Retraction of the exit pupil:
