

teleskopy.pl

An excellent planetary telescope with a lens diameter of 120 mm and a focal length of 1000 mm is intended for people waiting for high resolution and detail in observations of the Moon, the shield of Mars, Jupiter and Saturn. When using long-focal spectacles (we recommend a good eyepiece with a focal length of about 30 mm in the 2-inch frame), the star clusters, nebulae and galaxies also delight the dark sky. This telescope is also recommended for astrophotography of solar system objects - the moon and planets. It is an optical tube - there is no assembly (head and tripod) in the set. We recommend installing the tube on EQ5 or HEQ5 Sky-Watcher or similar. OFFERED TELESCOPIC LANDS TO START OBSERVATIONS IN THE FIRST FALLING NIGHT - INCLUDES ALL NECESSARY ACCESSORIES

Technical parameters

- Optical system: achromatic refractor
- Lens diameter: 120 mm
- Focal length of the lens: 1000 mm
- Lighted: 1 / 8.3
- Switching capacity: 1,3'
- Theoretical range: 13 magus
- Maximum useful magnification: 250x
- Weight: 3.5 kg

Equipment The set includes the following accessories:

- Spectacle lift - 2 "with reduction to 1.25"
- 1.25" and 1.25" eyepieces
- Angle connector 2" / 1.25" 90 °
- Spotting scope 8x50 with cross

Warranty 3 years

(note: below photo tube on EQ5 assembly, assembly is not part of this set) Warning! This device focuses a lot of light. Looking directly at the sun through this device can result in partial or complete loss of vision. For the observation of the Sun, we recommend the safest method of spectacle projection, that is, projecting the image of the target of our day star on a piece of paper.
