The Redleaf FlexFrame frame enables the GoPro HERO 3 / 3+ / 4 camera to be attached to the GoPro system fasteners without the waterproof case. Thanks to the use of a frame, we obtain better quality of recorded films. The frame is made of high-quality plastic and has openings to support all camera functions. It is an improved version, allowing a more convenient installation of the camera in the holder and its removal without the need to disassemble the mounting. In the set with a frame there is a quick connector and a screw. The accessory is dedicated to GoPro HERO 3 and 3+ cameras in all its versions (Black, Silver, White) and GoPro HERO 4 Silver and Black. (below: manufacturer's materials)
