Revolution in the Fenix brand! For the first time, we can present a flashlight with variable regulation of the concentration beam. Flashlight head is an innovative combination of spotlights to illuminate targets at a distance and up close. The FD40 uses the latest LED XP-L HI LED, which provides a great power of 1000 lumens and a distance of up to 300 meters of sheaf of light. Power is also an unusual solution, because you can use a traditional 18650 cell in a special holder or 26650 (both TO lithium-ion batteries), which also fits into this equipment. The housing was made of high quality aluminum, with an external hard black anodisation in black. The head containing the latest optical system is sealed, and to improve the work culture of the device is smoothly regulated. We change the light beam's concentration using a metal ring located on the head. The flashlight has six output modes, including the stroboscope function. The stainless steel side switch with lock-out protects the FD40 against inadvertent activation. This ultra-light flashlight has the ability to attach to a tripod, through a standard 1/4 inch thread, for example to be able to illuminate photographed objects. Fixed modes ∅ 1000 lm (1 h 25 min) ∅ 570 lm (5 h 5 min) ∅ 220 lm (14 h 40 min) ∅ 70 lm (49 h 45 min) ∅ 10 lm (308 h) Flashing modes ∅ stroboscope: 570 lm Technical parameters ∅ included: FD40 torch, 18650 battery holder, wrist strap, case, spare o-ring ∅ maximum range: 300 m ∅ maximum lighting time [h min] - 570 h ∅ power supply: 1 x 18650 (not included) or 1 x 26650 (not included) ∅ water resistance [according to IEC 529] - IPX-8 / OB 5: permanent immersion, protection against immersion in water; the equipment is resistant to immersion in conditions defined by the manufacturer; water can penetrate into the interior after exceeding the depth recommended by the
