

TPL RKE 32 mm is a three-element Reversed Kellner eyepiece (RKE) in a two-inch frame. It is an eyepiece with good optical parameters, with a large 56-degree field of view, good MC layers (anti-reflective) and high optical efficiency. It is therefore especially recommended for nebular observations, especially by telescopes with small light. The eyepiece has a conveniently retracted exit eye ( eye relief equal to 20 mm). Technical parameters : Focal length: 32 mm Field of view (AFOV): 56° Diameter of binding: 2 inches Filter thread: 2" / M48 \* 0.75 Retracting the output pupil: 20
