RealHunter ACTIVE Pro headphones are professional hearing protectors operating in both active and passive mode (23 dB NRR \*). Two directional microphones integrated in the body and enclosed with durable plastic housing are characterized by high sensitivity and precision. Thanks to them, the user can easily and freely conduct conversations or listen to the sounds of the environment, while being sure that all sounds of the outside world with a value above 85 dB will be timely and effectively cut off. RealHunter ACTIVE Pro active earplugs are powered by two AAA batteries, and the control is done by a knob that turns on or off the device after a clear turnaround. Further control of the knob increases or decreases the volume. An important feature of ACTIVE Pro, which will certainly please many people, is a mini jack that allows you to connect a radio, mp3 player or mobile phone, turning our headphones into "playing" equipment ". Importantly, despite the playback from an external device, the protectors still download the ambient sounds and cut off those above 85 dB. On the side, next to the control knob we can find a control diode, after switching on the headphones it lights up, informing us about the current mode of operation - active or passive. Rubber that is in direct contact with our ears is soft and delicate. It has a hole that removes excess air, thanks to which the protectors adhere very well to our head. The ridge, however, is trimmed with a pleasant to the touch, suede fabric. The large adjustment range of the ear muffs means that they are securely seated. RealHunter ACTIVE Pro will surely attract the attention of hunters, sports shooters and uniformed personnel who deal with weapons on a daily basis, all due to the narrow profile of headphones specially prepared for a bitch. Along with the handset, the customer also receives Protect protective goggles that have the ANSI standard. Thick glasses made of a transparent, non-distortive image of the material effectively protect the eyesight in crisis situations. The durability and resistance of the glasses has been confirmed by our test - a direct shot with an oversized rifle from a 17 J Jaw from a distance of 1 meter did not pierce the RealHunter glasses. It should also mention the 3-step adjustment of the temples and the soft rubber nose pads. Technical data

- NRR \* noise reduction factor: 23 dB
- cutting off the sounds above: 85 dB
- power supply: 2 x AAA (not included)
- weight: 272gram (without batteries)

\* NRR - Noise Reduction Rating - the noise reduction indicator in Poland means the approximate level of noise reduction achieved thanks to the protector, expressed in dB. Characteristics

- passive mode (23 dB NRR \*) and active (cut-off above 85 dB)
- two fixed directional microphones
- mini jack for connecting an external device (cable included)
- a diode informing about the current device operating mode
- side profile for a bale

Warranty 24 months
