---

The heating band for the astronomical telescope allows delicate heating of the optical elements (eg lens lenses) and in this way, remove the misting and prevent the condensation of water vapor on the optics. It has an integrated controller (3 positions: LO - OFF - HI).    length of the heating band: 108 cm    total length with fixing: 120 cm    length of the power cord: approx. 50 cm    width of the band: 5 cm    power supply: 12 V direct voltage, power consumption depending on the length of the band, can reach HI to 1 A    A power outlet that matches the round 2.1 / 5.5 mm power plug    suggested cooperating power supply (click to go to the product page)
