

The D-SCT-TA adapter changes the classic 2" angled connector (as used in refractors) into an SCT threaded connector without the need to change the entire bow. 2" and in its place screw the SCT adapter or screw this adapter directly into the toe. Works with many 2-inch angles, which have a screw-on nose in the 2" standard (M42 \* 0.75) or a filter thread at the end of the 2" nose. (Please check before purchase that your connector has a nose 2" / M48 x 0.75, because this element is not standardized in the astronomical world and even the older tips WO had a thread different than M48 \* 0.75 nose toe 2". Technical parameters / features ∅ thread from the side of the bow: M48x0.75 ∅ thread from the telescope side: SCT / 2" 24 TPI ∅ total length: 27 mm ∅ thread length M48: 4.8 mm ∅ clean aperture: 41 mm ∅ Maximum diameter: 60 mm ∅ known compatible tips: Explore Scientific 2", GSO 90 ° 2" ordinary and dielectric, currently offered 2"
