

teleskopy.pl

The Fotopro RM-95 is a small and light tripod designed to work with mobile phones and devices equipped with a GoPro system mount. Thanks to the small dimensions after folding (22 cm long with a telephone attachment, and only 15 cm with a mount for the GoPro system), the tripod can fit virtually into any bag or backpack. RM-95 is made of high quality plastics, so it weighs only 83 g. Flexible legs, foam covered with a touch feel enable installation almost anywhere. The legs of the tripod are equipped with rubber tips ensuring stability on smooth surfaces. The camera holder accommodates devices between 5.6 cm and 8.4 cm wide. Technical parameters

- fixing: GoPro standard + smartphone holder
- length after folding: 22 cm (15 cm without a telephone holder)
- length of the legs: 12 cm
- lifting capacity: 500 g
- weight: 83 g
