

Astronomik MC-CLEAR filter in the frame 1.25" / 31.7 mm. The MC-Clear filter serves as a dust protection and allows the camera position to be paraphocalized in the "without filter" system as well as with other Astronomik filters. The MC layers ensure no unwanted reflections. It does not block the IR or UV spectrum. It does not change the white balance, colors, does not worsen the optical system. Technical parameters \varnothing protects the camera matrix \varnothing diffraction-limited accuracy \varnothing parfocal with other Astronomik filters \varnothing thickness: 1 mm \varnothing resistant to moisture, scratch, does not age
