

Levenhuk N10 - a set of 10 biological preparations in a suitcase (zoology). Preparing the slide for observation under a microscope is a real challenge. First of all, special tools are needed to cut thin pieces of the sample. Second, placing the specimen on a slide and then covering it with a coverslip requires high precision and attention. Doing this incorrectly may damage the slide or preparation. Most people avoid preparation of preparations at all costs because of the amount of work involved. That is why we have prepared a set for experiments containing ready-made preparations that can be used right out of the box! No more cutting off, putting on the slide, adding resin - all slides in the Levenhuk N10 NG set are already well prepared. Just place them on the table and set the focus. If you feel strong enough to prepare your own preparation, you will find a few basic and cover slips that you can use. Preparations from the Levenhuk N10 NG kit can be used with a microscope of any brand. The set of pre-made Levenhuk N10 preparations includes the following preparations: ⚡ bird feathers ⚡ cat's hair ⚡ dog hair ⚡ fish scales ⚡ frog's blood ⚡ fish blood ⚡ ant ⚡ Be ⚡ bee wing ⚡ mosquito leg The kit also includes 12 coverslips and coverslips.
