Levenhuk Vizor G1 is a comfortable 20x magnifier on the head with LED backlight. You can move the lens to the left and right on the ring (for the right eye) or move it completely away. Thanks to the Levenhuk Zeno Vizor G1 glasses both hands remain free - that's why they are recommended for people working on small objects and performing tasks requiring high precision. The magnifier is useful when repairing watches, electronics, jewelry and collecting small objects, as well as in medicine and other applications. The 20x magnification lens made of optical plastic provides a detailed image with clear and sharp contours of the observed objects. The backlight on the side of the lens is bright and illuminates a large area. It is also possible to work in total darkness. The backlight is powered by batteries that are included in the kit. Technical parameters â€¢ magnification: 20x â€¢ Lens diameter: 15 mm â€¢ a magnifying glass on the head in the form of a spectacle frame â€¢ built-in LED backlight (1 white LED) â€¢ optical material: plastic â€¢ power supply: CR1620 2 pieces Warranty 2 years (below - photos of the producer)
